```
; a3 template.asm
; CSC 230 - Summer 2018
; Starter code for A3.
; B. Bird - 07/01/2018
.include "lcd_function_defs.inc"
; Stack pointer and SREG registers (in data space)
.equ SPH DS = 0x5E
.equ SPL DS = 0x5D
.equ SREG DS = 0x5F
; Initial address (16-bit) for the stack pointer
.equ STACK_INIT = 0x21FF
; Definitions for button values from the ADC
; Some boards may use the values in option B
 The code below used less than comparisons so option A should work for both
; Option A (v 1.1)
;.equ ADC BTN RIGHT = 0x032
;.equ ADC BTN UP = 0x0FA
;.equ ADC BTN DOWN = 0 \times 1C2
;.equ ADC BTN LEFT = 0x28A
;.equ ADC BTN SELECT = 0x352
; Option B (v 1.0)
.equ ADC BTN RIGHT = 0x032
.equ ADC BTN UP = 0x0C3
.equ ADC BTN DOWN = 0x17C
.equ ADC BTN LEFT = 0x22B
.equ ADC_BTN_SELECT = 0x316
Reset/Interrupt Vectors
.org 0x0000 ; RESET vector
      jmp main begin
; Add interrupt handlers for timer interrupts here. See Section 14 (page 101) of the datasheet for
addresses.
Main Program
; According to the datasheet, the last interrupt vector has address 0x0070, so the first
; "unreserved" location is 0x0072
.org 0x0072
main_begin:
       ; Initialize the stack
      ldi r16, high(STACK INIT)
      sts SPH_DS, r16
      ldi r16, low(STACK_INIT)
      sts SPL_DS, r16
      ; Initialize the LCD
      call lcd init
```

stop:

rjmp stop
